Patent No. 6562958

GENERAL INFORMATION:
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER
TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
TITLE REFERENCE: GTC99-03PA
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT FILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: PREUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 2709.2004001
CURRENT APPLICATION NUMBER: US/09/489,039A
CURRENT PILING DATE: 2000-01-27
PRIOR APPLICATION NUMBER: US 60/117,747
PRIOR FILING DATE: 1999-01-29
NUMBER OF SEQ ID NOS: 14342
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 11316, Application US/09489039A

Application US/09741243C
Patent No. 6399352
GENERAL INFORMATION:
APPLICANT: Crawford Jr., John Milton
APPLICANT: Sevala, Veeresh
APPLICANT: Sevala, Veeresh
APPLICANT: Sevala, Veeresh
TITLE OF INVENTION: NOVEL PLANT PORPHOBILINOGEN AND FUSION
TITLE OF INVENTION: PROTEIN THEREOF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CTHER INFORMATION: A plant thioredoxin-porphobilinogen CTHER INFORMATION: synthase fusion protein US-09-741-243C-2
APPLICANT: Ni et al.
TILE OF INVENTION: 32 Human secreted proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         COUNTRY: US
ZIP: 98104-7092
COMPUTER READABLE FORM:
MEDIUW TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/432,871C
FILING DATE: 02-MAY-1995
CLASSIFICATION: 514
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 82, Application US/08432871C

Patent No. 5877010

GENERAL INFORMATION:
APPLICANT: Loeb, Lawrence A.
APPLICANT: Black, Margaret E.
TITLE OF INVENTION: THYMIDINE KINASE MUTANTS
NUMBER OF SEQUENCES: 104

CORRESPONDENCE ADDRESS:
ADDRESSEE: Seed and Berry LLP
STREET: 6300 Columbia Center, 701 Fifth Avenue

; Patent No. 5459235
; GENERAL INFORMATION:
    APPLICANT: SELSTED, MICHAEL E.
    APPLICANT: SELSTED, MICHAEL E.
    APPLICANT: CULLOR, JAMES S.
    TITLE OF INVENTION: NOVEL ANTIMICROBIAL PEPTIDES FROM BOVINE
    TITLE OF INVENTION: NEUTROPHILS
    NUMBER OF SEQUENCES: 22
    CORRESPONDENCE ADDRESS:
    ADDRESSEE: CAMPBELL AND FLORES
                                                                                                                                                                                                                          Sequence 7, Application US/08033873

COMPUTER: IBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.25

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/033,873

FILING DATE: 19310319

CLASSIFICATION: 424

ATTORNEY/AGENT INFORMATION:

NAME: CAMPBELL, CATHRIN A.

REGISTRATION NUMBER: B-UC 9552

FELECOMMUNICATION INFORMATION:

TELEPONE: (619) 535-8949

INFORMATION FOR SEC ID NO: 9:

SEQUENCE CHARACTERISTICS:

LENGTH: 40 amino acids

TYPE: amino acid

TYPE: amino acid

TYPE: amino acid
